Review of Simulation Plan Components (Recommendation #1) continued from previous meeting (2.16.18)	<ul style="list-style-type: none"> Population-modifications needed: do we need to prescribe the “age” of the patient? What if a school doesn’t have variety of simulators? Could we state recommended population? But should it stay in at all, if only a recommendation? Should we leave as is, take it out, or move to recommendation? Concept(s)-move to Exemplar column Competencies-need to stay, but we can revise as we look at each simulation. They reflect/correspond with the NMNEC curriculum within level/course objectives. Safety? Is not currently a component, should it be added? There will probably always be a safety factor within each scenario, so we should get credit? Lots of discussion about sources. 	<p><u>Population</u>-remove from components, move to recommendation/guideline #13</p> <p><u>Concept(s)</u>-move to exemplar column</p> <p><u>Competencies</u>-keep as component and revise individually as we address each simulation in future meetings. We will ensure they are reflecting current curriculum. Add Definition: “Competencies refers to NMNEC competencies that students need to demonstrate at the end of the program”.</p> <p><u>Safety</u>-opposed to addition</p>
